

## Capstone Project

### **Museum of Candy**

#### Introduction

This website named **Museum of Candy** is a basic implementation of the concepts accumulated throughout this course. The core sense of developing this project was to implement some concepts learned, not all. Hence, only a few features of Bootstrap 4 and JQuery have been included.

Some of the features of the website are:

- a. Responsive Design using Bootstrap 4
- b. Fixed Navbar
- c. Inclusion of Card Component
- d. Inclusion of Modals
- e. Use of CSS FlexBox
- f. Using fonts from Google Fonts

#### Design and Implementations

- The plan was to build a simple yet aesthetic website. The primary focus was on the visual aspect of the website; hence the core work is concentrated on Bootstrap 4's colors and themes.
- The initial plan was to create at least 2-3 interlinked pages of content but it was cut-short.
- At first the Grid Box system was used in order to achieve the responsive layout but then Bootstrap inclusion made the work easier.
- The libraries used in the website are Bootstrap 4 and Google Fonts. These were used in order to give the project a visual appeal.
- Screenshots of the website are attached in the next page.

## **Conclusions**

- The major take-backs from this project would be the implementation of BootStrap 4 and Responsive Design.
- There are various things that I'd like to work upon on, for starters, including different pages and implementing various BootStrap components like Carousel, etc.
